參數中的輸送能力及吸料揚程是以ABS原料堆積密度約0.65kg/L,直徑為3~5mm塑膠原料顆粒為測試材料以垂直高度4m,水平距離5m為測試標準所得.實際參數根據塑料比重、形狀及輸送長度、高度、管路特性、參數設定等因素而改變。

The above parameters for conveying capacity and loading distance is based on ABS raw materials accumulation density approx. 0.65kg/L, with 3-5mm diameter of plastic materials particles as testing samples, with vertical high 4m and horizontal distance 5m as testing standard to get results. The exactly parameter would not be the same as per different plastic proportion, figure, conveying length and height and pipeline feature etc.

吸料機在輸送熱料時，料管需選配耐160度高溫料管。

Heat-resistant(160) pipes should be used when conveying hot material.

High glossy temperature controller

高光蒸汽模溫機

高光蒸汽模溫控制機簡介

高光蒸汽輔助成型控制機技術是採用高溫蒸氣，當注塑機合模後注入高溫蒸氣，首先把模具溫度提高到一個設定溫度值，然後開始給模腔注射塑膠，在注塑機完成保壓後迅速注入冷卻水或冷凍水，使之模具在短時間內降到一個設定的溫度值後開模，再向模具吹入空氣把殘餘的冷水吹走，完成一個周期的注塑過程。通過這種迅速冷熱的方式控制塑料件的成型可以完全解決塑料件的外觀缺陷，大大提高生產效率。

High-gloss steam mold temperature control unit introduction

High-gloss steam mold temperature control unit provide high-temperature steam, when clamping the mold, the high temperature steam is injected into the injection, the mold temperature is increase to a set temperature value, then inject the plastic into the injection cavity. Inject cooling water or chilled water rapidly after the completion of the injection molding machine holding pressure, so that the mold can open after the mold temperature comes down to a set value within a short period of time, blow air into the mold to blow away the remnants cold water, completing a injection process cycle control. through such rapid hot and cold plastic molding can completely solve the appearance of defects of the plastic parts, improve production efficiency.
